

## New addition to the SuperLinear family...

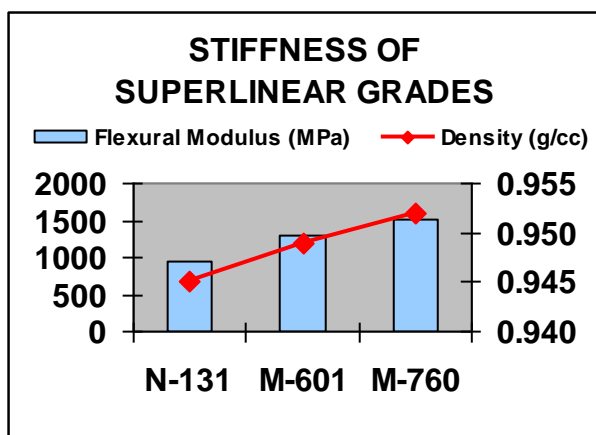

### Revolve M-760

Matrix has just added a new product to their existing range of SuperLinear grades. This new rotomouldable S/L grade, **M-760 (0.952/3.3)**, has been designed to provide enhanced stiffness without compromising impact and mouldability. The grade is fully UV stabilised, designed to withstand harsh environments and is available in a range of colours. **M-760** can be used in single layer applications (e.g. sit-on-top kayaks) or in double/triple layers applications with any Revolve PE foam products.

#### FEATURES

- Outstanding Stiffness
- Very High Impact Strength
- UV Stabilised

For very tough and stiff applications like those in the leisure marine industry, Matrix advises its customers to use the new SuperLinear grade **M-760 (0.952/3.3)** in conjunction with the new ultra stiff foam PE **M-54**. Best results can be achieved by monitoring the internal temperature which will help to establish the optimum moulding conditions.

For any additional information on this or any other Revolve grade please contact one of our Field Sales Managers in your geographical territory or click on [www.matrixpolymers.com](http://www.matrixpolymers.com)
